Pleasant Prairie, WI 53158

August 30, 2011

To Our Valued Reps and Customers:

As of September 1st, 2011 Honeywell Cable will officially introduce our improved RG6 Quad Shield coax with WaveFLEX™ jacketing (Part number 5007). This will be the third installment of our patent-pending WaveFLEX series, following our RG59 (Part number 5001) and our Audacious™ Sound Cables (Part numbers 5473 through 5476). Enclosed with this letter is our updated flyer, which describes our WaveFLEX offering. You can download this flyer off our website after September 1st or ask your Inside Sales Representative for printed copies.

WaveFLEX jacketing makes cable easier than ever to strip, allowing users to experience faster terminations in coax and fewer cuts on copper conductors. This design was engineered with the dealer in mind, allowing them to save money and move onto the next job more quickly. In 2010, WaveFLEX was also a finalist in the CE Pro Best Awards, which recognizes the most noteworthy new products and technologies of the year.

We are transitioning our manufacturing processes to this design immediately. Based on current inventory levels some skus may have the WaveFLEX design more quickly than others. Our part numbers will remain the same and we are confident that you should experience no supply interruptions.

Thank you for your continued support.

Sincerely,

Leann Meachum  
Product Manager  
Honeywell Cable & Custom Electronics
