

Metal Clad Fire Wire: No Conduit Needed

Innovation That Works with You

Honeywell's metal clad fire alarm cables save time and money by eliminating the need to bend, install and mark rigid conduit prior to cable installation. Much easier to work with, the metal clad fire cable is marked with a continuous, permanent red helical tape, running the entire length of the cable, and remaining affixed to the flexible armor to ensure proper identification as a fire alarm circuit.

Dual-listed MC and FPL to accommodate either non-power-limited (NPLFA) or power-limited (PLFA) fire alarm circuits, Honeywell Cable's metal clad fire cable is an ideal solution for jurisdictions where conduit is required. Type MC is permissible to install in plenums per NEC 300.22C.

Remember, when it comes to ensuring optimal connectivity, unlike other cable, ours is made by the same company that makes the devices they're connecting. And, like all Genesis® Series Cable, Honeywell's metal clad fire alarm cable is backed by the industry's only 3-for1 guarantee!

Here's a guide to the specific metal clad fire alarm cable products we offer:

PART NUMBER	DESCRIPTION	
429001M4	18/2 SOLID TFN + GROUND	250' Reel
429101M4	18/4 SOLID TFN + GROUND	250' Reel
429201M4	16/2 SOLID TFN + GROUND	250' Reel
429301M4	16/4 SOLID TFN + GROUND	250' Reel
429401M4	14/2 SOLID THHN + GROUND	250' Reel
429501M4	14/4 SOLID THHN + GROUND	250' Reel
429601M4	12/2 SOLID THHN + GROUND	250' Reel
