

Striped Fire Wire: Simplifying Installations

Innovation That Works with You

Easily differentiate between circuits with Honeywell’s striped fire alarm cables. Expedite installations, and eliminate the hassle of marking and tracing cables in a bundle to identify the one you’re looking for. By assigning a different stripe color to each type of circuit on the job site, you will be able to maximize field productivity and minimize time wasted due to confusion.

The stripes on these cables are extruded into the cables’ jackets so they won’t rub off like printed ink stripes. Like all Genesis® Series fire alarm cables, Honeywell’s striped fire alarm cables are UL listed and recommended for use in UL Certified Fire Alarm Systems. Honeywell Cable proudly manufactures striped fire alarm cables in Pleasant Prairie, WI, USA!

Here’s a guide to the specific cable products and their stripe colors – all colors come in 1000' reels:

DESCRIPTION	JACKET COLOR	PART NUMBER
18/2 Solid Plenum (FPLP)	Red with Blue Stripe	4506104B
